ditions of life, and from use and disuse; a Ratio of Increase so high as to lead to a Struggle for Life, and as a consequence to Natural Selection, entailing Divergence of Character and the Extinction of less-improved forms. Thus, from the war of nature, from famine and death, the most exalted object which we are capable of conceiving, namely, the production of the higher animals, directly follows. There is grandeur in this view of life, with its several powers, having been originally breathed into a few forms or into one; and that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved.

Origin of Species, 1st ed. (1859)

This topic has occupied a significant proportion of my research. Before I began work on Remarks I was reading especially widely; I recall the moment I stumbled across a passage from Darwin's Origin of Species that applied equally to my work and research as it did his: 'From so simple a beginning', he wrote in 1859, 'endless forms most beautiful and most wonderful have been, and are being, evolved'. Darwin writes without passing judgement, and I found a fantastic humility in his paradox of the 'endless' existence of the 'most' beautiful. In Remarks, written specifically for a conducted choir of sixteen in Cambridge, I wished to represent some of the city's rich choral tradition.

When a musical history is regarded as a linear series of developments it can effect the depiction of, for example, Monteverdi's work as primitive Baroque. Such a conclusion is clearly inappropriate. The perspective, instead, that music appears not of itself on a timeline but within a social context is more convincing.

Towards the end of Titus Andronicus, one of Shakespeare's early plays, Titus's brother, Marcus Andronicus, addresses the room; his speech follows two hours of terrible violence, featuring no fewer than six severed members. In these concluding remarks Marcus Andronicus calls on us to take responsibility, to put back together what has come apart — literally, to remember the play's events. 'O, let me teach you how to knit again', he speaks.

The notation of sung music inhabits a strange space in the complex web of relations that exists between text and music, between notated and oral traditions, between singer and conductor. In the context of Remarks, knitting and remembering take centre stage. It's a composition that ultimately examines notation: what it can say and what it cannot, the importance of those things that cannot be said, and the importance of acknowledging the shortcomings of attempts to label them.

Extracts from a talk given by Berio entitled Remarks to The Kind Lady of Baltimore are spoken throughout the piece. Berio discusses how music relates to the world around us, how it relates to language, to words, and how it relates to ourselves. The layered talk culminates in a climax in which Berio describes people facing each other in two fronts; 'the issue', he remarked, 'appeared to be mainly a disagreement about terms, about the labelling of things rather than the things themselves'.

In a similar vein there are two musical fronts which clash in this piece: one without words, in which the voices are almost instruments, the other with words, sometimes inhabiting an Elizabethan social dynamic familiar to the Shakespeare. As the dialogue progresses throughout, the piece teaches itself how to sing.

Linking all of this is the tangled doctrine of the authority of a descriptive score. Across the two musical systems the notation of dynamics, of articulation and so on, adapts to the social dynamic, in opposition to or in cooperation with each other. These conflicts are reflected in Berio's words, resolved in Shakespeare's moral, and celebrated in Darwin's regard of 'endless forms' most beautiful'.

NOTE TO THE CONDUCTOR

The two bodies of singers are to face each other.
